SUMMARY

Full-stack software engineer with **10+ years** of experience building scalable and distributed systems across consumer and enterprise products. Currently a Senior Product Engineer at OneRail, building an invoicing platform that processes **millions of deliveries** each month with **.NET**, **Node.js**, and **React**, and leading AI-augmented engineering initiatives at Limestone Digital. Former founder and tech lead of Brazil's largest Minecraft server network, scaling to **16M** accounts and a national record of **8,115 concurrent players**. Currently pursuing a Software Engineering degree at PUC Minas.

PROFESSIONAL EXPERIENCE

Senior Product Engineer | OneRail (July 2025 – Present)

Final-mile delivery orchestration platform based in Orlando, Florida.

Build and evolve **Freight Audit & Pay**, OneRail's invoicing and dispute management platform, which handles invoicing for **millions of deliveries** each month. Engaged full-time through Limestone Digital.

- Part of the **two-engineer team** that pioneered end-to-end AI-assisted development at OneRail, informing the company-wide adoption of AI as a core engineering tool.
- Design and maintain distributed services in **.NET 10** and **Node.js** with a **React** frontend, integrating MySQL, PostgreSQL, and Snowflake, including background jobs for invoice population, data synchronization, and approval workflows.
- Solve scalability challenges across data processing, invoice generation, and retrieval, making **millions of delivery records** accessible through the application.
- Main maintainer of the shared .NET monorepo: **CI/CD pipelines**, automated SDK generation, and shared libraries used across teams.
- Drive product discovery with stakeholders and internal auditors, collaborating with architects and engineers across the United States, Poland, Colombia, and Europe.

AI Productivity Lead | Limestone Digital (July 2025 – Present)

Nearshore engineering company that builds engineering teams for clients in the US and Europe.

Lead **AI-augmented engineering** and productivity initiatives for **28 contractors** assigned to OneRail, Limestone Digital's largest client, alongside my full-time engineering engagement at OneRail.

- Help engineers explore, evaluate, and apply AI-assisted approaches to everyday development challenges, and define adoption strategies grounded in conversations with contractors.
- Partner with the **COO** and Project Manager in weekly reviews to assess productivity reports and turn findings into changes to engineering workflows.
- Support **technical pre-sales** with C-level executives, presenting the company's AI-augmented engineering approach to prospective clients.
- Conducted technical interviews with **130+ engineers**, covering backend and frontend development and practical AI proficiency.

Software Engineer | 90 Information Technology (June 2024 – May 2025)

Company that develops management systems for civil engineering.

Developed web products and led **engineering modernization**, improving the foundations, tooling, and practices used by a team of **25+ developers**.

- Designed and developed the company's new **web ERP**, building its application foundation and most shared components from a Figma design system.
- Built a full-stack platform connecting **100+ ERP clients** with construction material suppliers using **.NET 9**, **Next.js**, **TypeScript**, **PostgreSQL**, and **Docker**.
- Led company-wide adoption of a modern web stack and migrated the legacy codebase from SVN to **GitHub**, introducing **code review** and **CI/CD** pipelines.

- Improved the company website with a streamlined SaaS checkout, a corporate blog, and CRM-integrated lead capture, and launched a centralized **knowledge base** for the software suite.

Founder & Tech Lead | Rede Sky (July 2015 – September 2022)

Largest Minecraft server network in Brazil from 2015 to 2022.

Founded and led Brazil's largest Minecraft server network for **seven years**, growing it to **16M+ registered accounts**, **300K monthly active players**, and a national record of **8,115 concurrent players**.

- Architected scalable **Java** systems supporting thousands of concurrent players across dozens of custom game modes, including a **distributed** game mode where **1,000+ players** shared a single virtual environment.
- Built and maintained hundreds of custom plugins powering matchmaking, gameplay logic, anti-cheat, virtual economies, and real-time events.
- Led the development team and set architecture, **CI/CD**, and workflow standards across **250+ Git repositories**.
- Automated infrastructure with **Bash** and implemented monitoring with **Grafana** and **Sentry**, while directing business operations, growth strategy, and community engagement.

Founder & Tech Lead | Mineland Network (July 2014 – August 2015)

Minecraft server network with five custom game modes.

At 14, started Mineland Network with friends, growing it to **500+ concurrent players** across **five custom game modes**. Learned **Java**, web development, and **Linux** server administration while building, running, and promoting my first online product.

ACADEMIC BACKGROUND

Bachelor's Degree in Software Engineering

Pontifical Catholic University of Minas Gerais
Feb 2023 – Dec 2026 (Expected)

Academic Recognitions:

- **2× Academic Excellence Award** – Given every semester to the single student with the best overall academic performance among 700+ students.
- **5× Outstanding Project Award** – Given every semester to a single team for the best project in the course. Led the winning team in every occurrence.
- **2× We Make Software** – Winning Project (2024/1), 3rd Place (2024/2)

TECHNICAL SKILLS

- **Languages:** Java (10+ yrs), TypeScript, C#, C, SQL, Bash, HTML and CSS
- **Back-end:** .NET 10, Node.js, Express.js, Spring Boot
- **Front-end:** React, Next.js, Vite, Svelte, SvelteKit, Tailwind CSS, TanStack
- **Databases:** PostgreSQL, MySQL, SQL Server, MariaDB, SQLite, Redis, Snowflake
- **Messaging & Data:** Apache Kafka, Confluent, Sequelize, Entity Framework
- **DevOps & Infra:** Docker, Linux, GitHub Actions, Cloudflare Workers
- **Observability:** OpenTelemetry, Grafana, Zabbix, Sentry
- **Others:** AI-Augmented Engineering, System Design, Software Architecture, Clean Architecture, Domain-Driven Design, Design Patterns, Git

LANGUAGES

- **Portuguese:** Native
- **English:** Advanced
